## East Clayton - Surrey, BC

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

1. Conserve land and energy by designing compact walkable neighbourhoods. This will encourage pedestrian activities where basic services are within a five to six minute walk of their homes.

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

2. Provide different dwelling types (a mix of housing types, including a broad range of densities), in the same neighbourhood and even on the same street.

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

3. Communities are designed for people, therefore, all dwellings should present a friendly face to the street in order to promote social interaction.

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

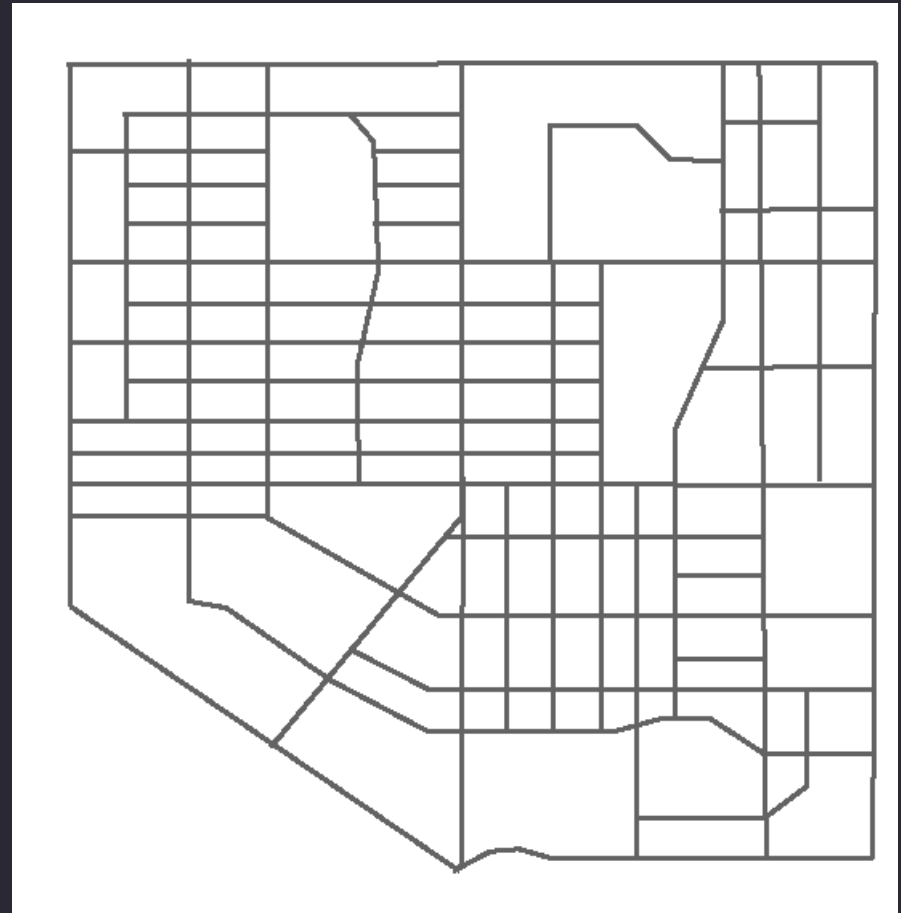

4. Ensure that car storage and services are handled at the rear of the dwelling.

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

5. Provide an **Interconnected street network, in a grid or modified grid pattern, to ensure a variety of itineraries and to disperse traffic congestion; and provide public transit to connect with the surrounding region.**

## Case Studies for Sustainable Community

## The Seven Principles for Sustainable Community Design

6. Provide narrow streets shaded by rows of trees in order to save costs and to provide a greener, friendlier environment.

## Case Studies for Sustainable Community

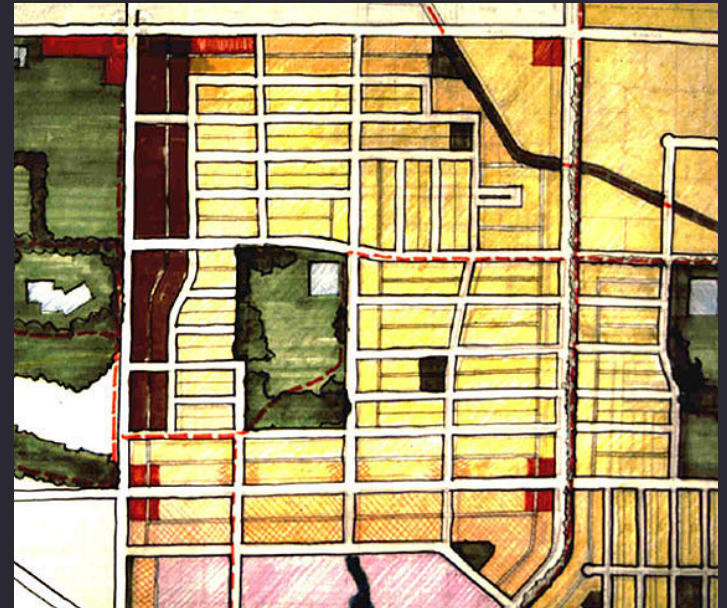

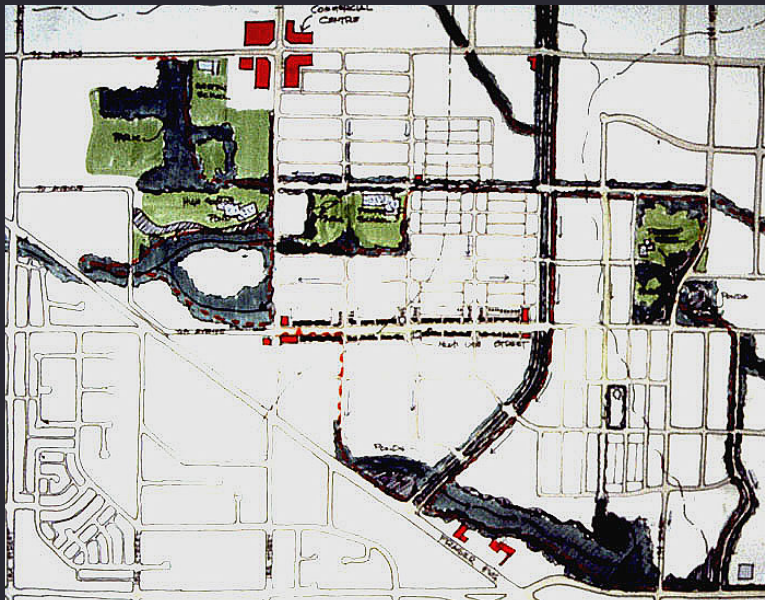

## The Seven Principles for Sustainable Community Design

7. Preserve the natural environment and promote natural drainage systems (in which stormwater is held on the surface and permitted to seep naturally into the ground).

## Affordability and Choice Today (ACT) Program: Phase E: Final Report

### NCP OBJECTIVES

Front yard setbacks should be reduced to 4 meters for single family lots and elevated front porches should be encouraged.

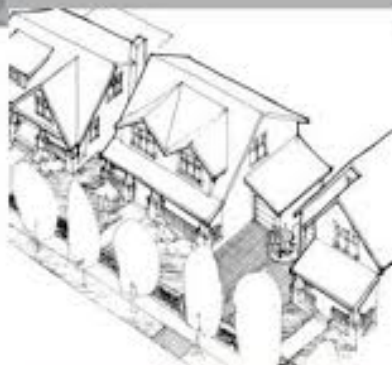

### PROJECT RESULTS

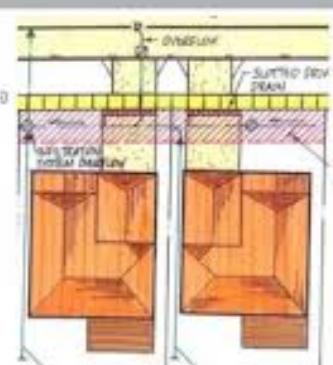

Achieved, as seen in picture above, 4 meter standard setbacks have been followed and front porches included.

### COMMENTS/LESSONS

- Residential development has taken place within the RF-12 Zone, which allows 4 meter setbacks, front porches and a further front setback of 2 meters in possible.
- RF-12 also requires that front garages be designed to be ancillary in the overall house design, and a 2 meter setback was enforced for front access garages from the primary facade of a house.

For blocks with no lanes, shared driveways should be provided to reduce the number of curb cuts.

Partially achieved; for blocks with no lanes, it was decided that driveways would instead be paired.

- Although paired driveways are a departure from shared driveways, they continue to minimize curb cuts.
- The decision to provide paired instead of shared driveways was an attempt by the developer to compensate for the perceived risk involved in reduced front setbacks and lot sizes.
- Success in sales so far, over 100 lots sold since January 2003, has encouraged developers in future phases to accept universal lane access and will eliminate environmental, social and transportation safety issues consequent to driveways.

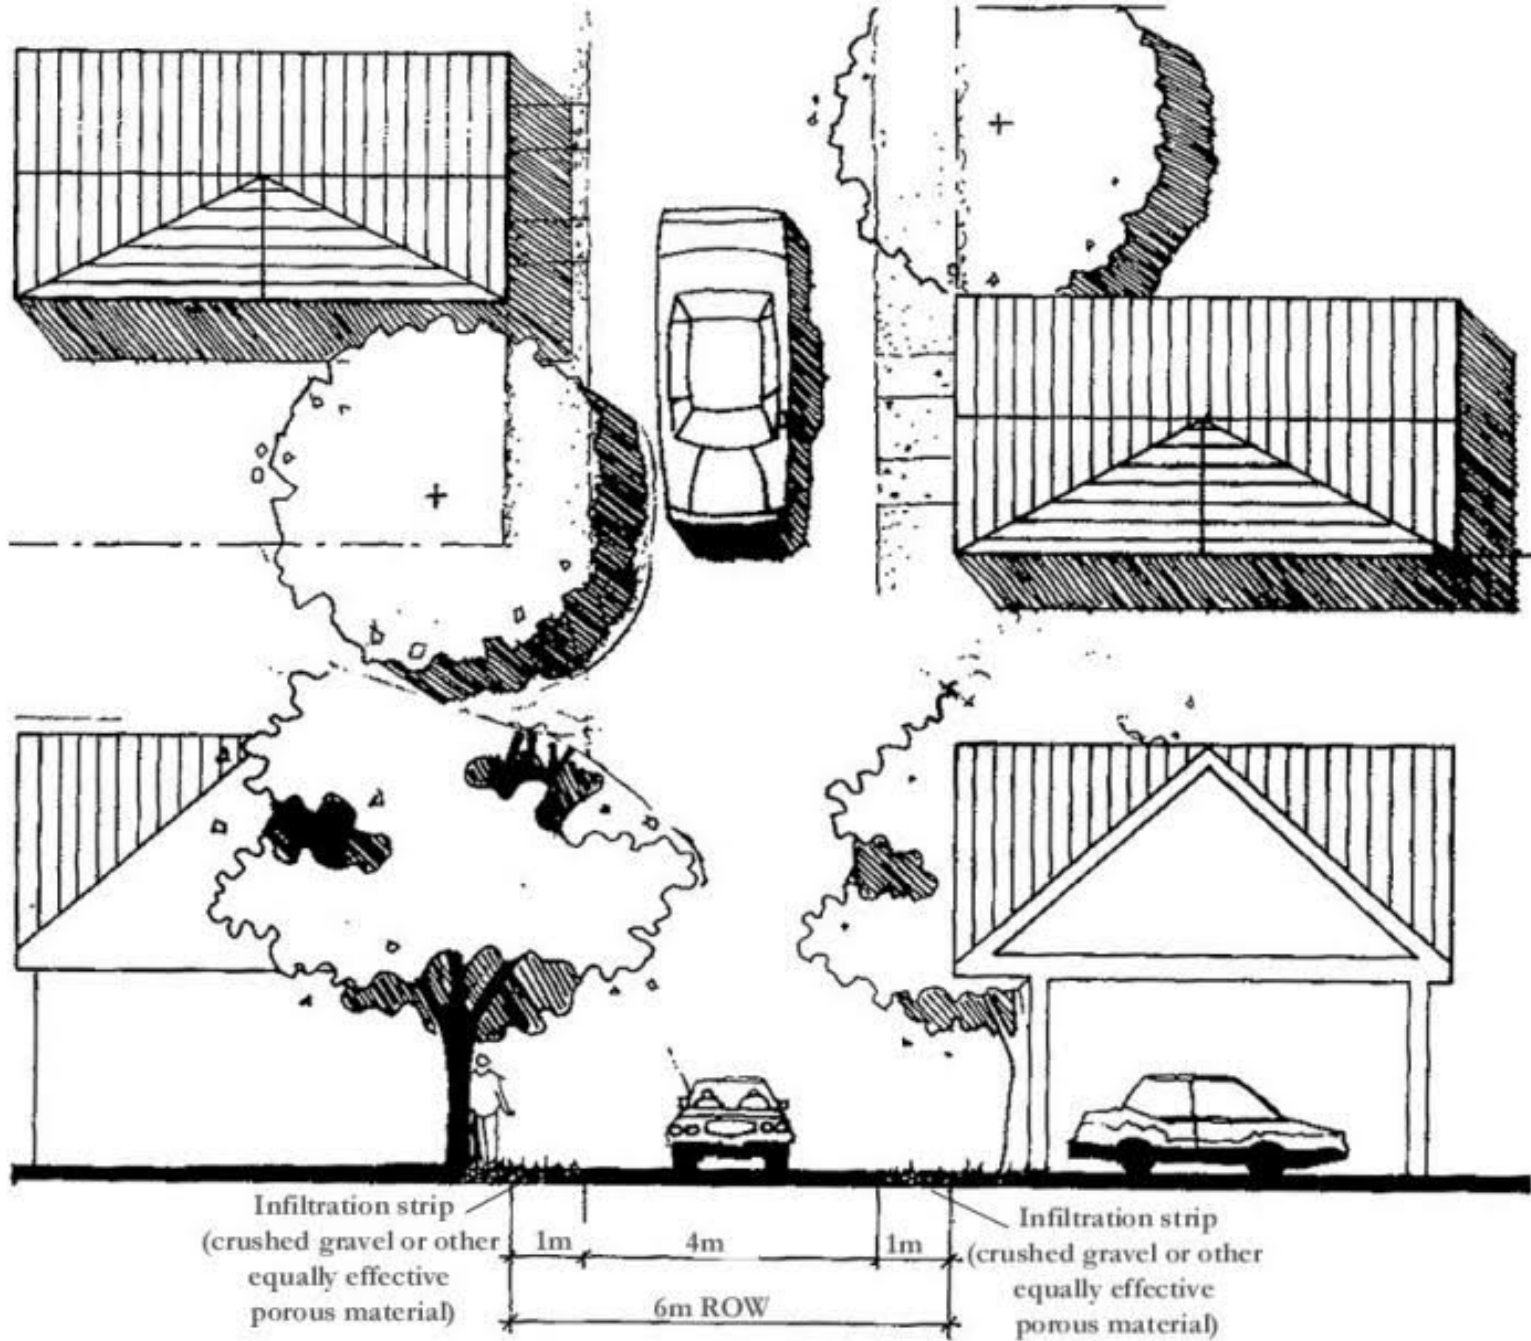

Diagram of rear lanes to be integrated into community.

# Preferences

# Preferences

Methods: interviews & focus groups

Findings:

- Residents prefer stands of trees, mature trees, and native trees
- Current conditions don't meet these values

# Interviews

*"Do you see any pine trees now? This place used to be full of pine trees"*

*"When Clayton was forested, there were occasional magnificent fir trees. One was left standing at the elementary school site\*, but when the school went in, they took out the tree. I guess it was a safety issue because of the kids."*

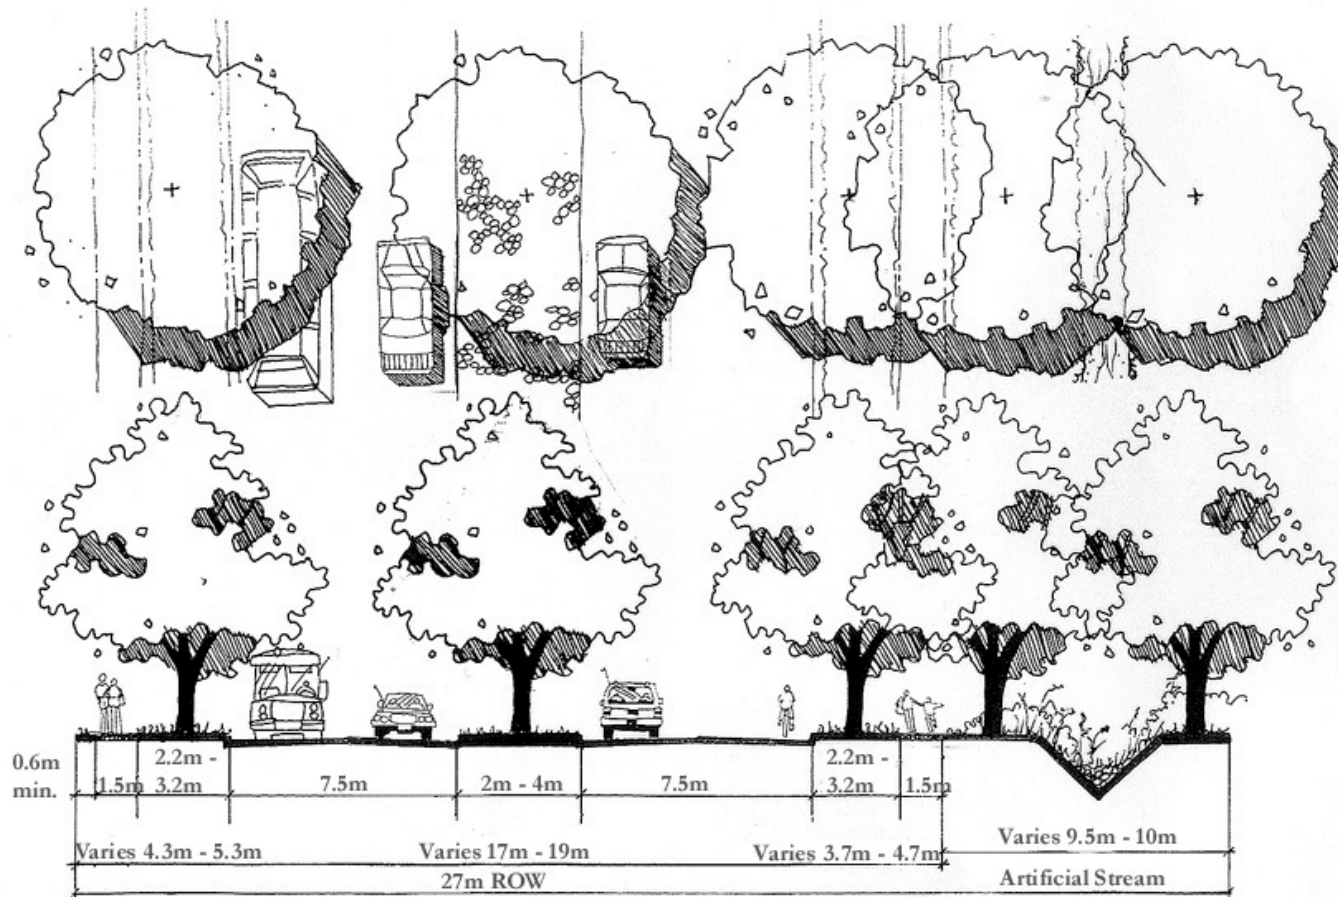

\*This particular tree was mentioned by 2 residents

# Stands of trees

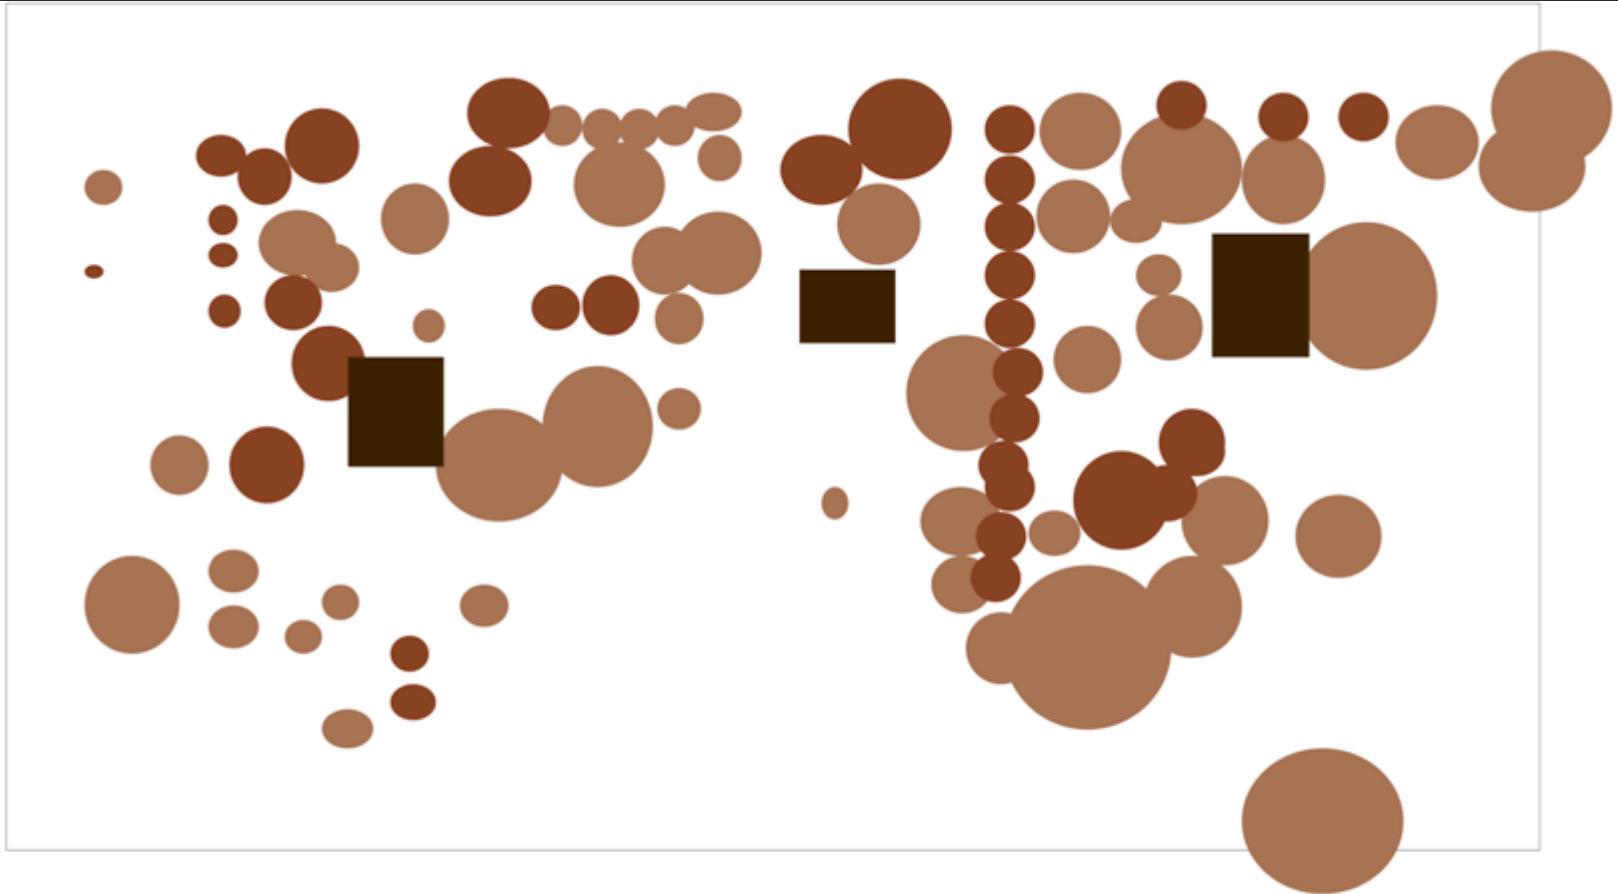

*Below: Riparian Parkway Greenway. An artificial stream located in boulevard, provides habitat and biofiltration of surface water.*

# Mature trees

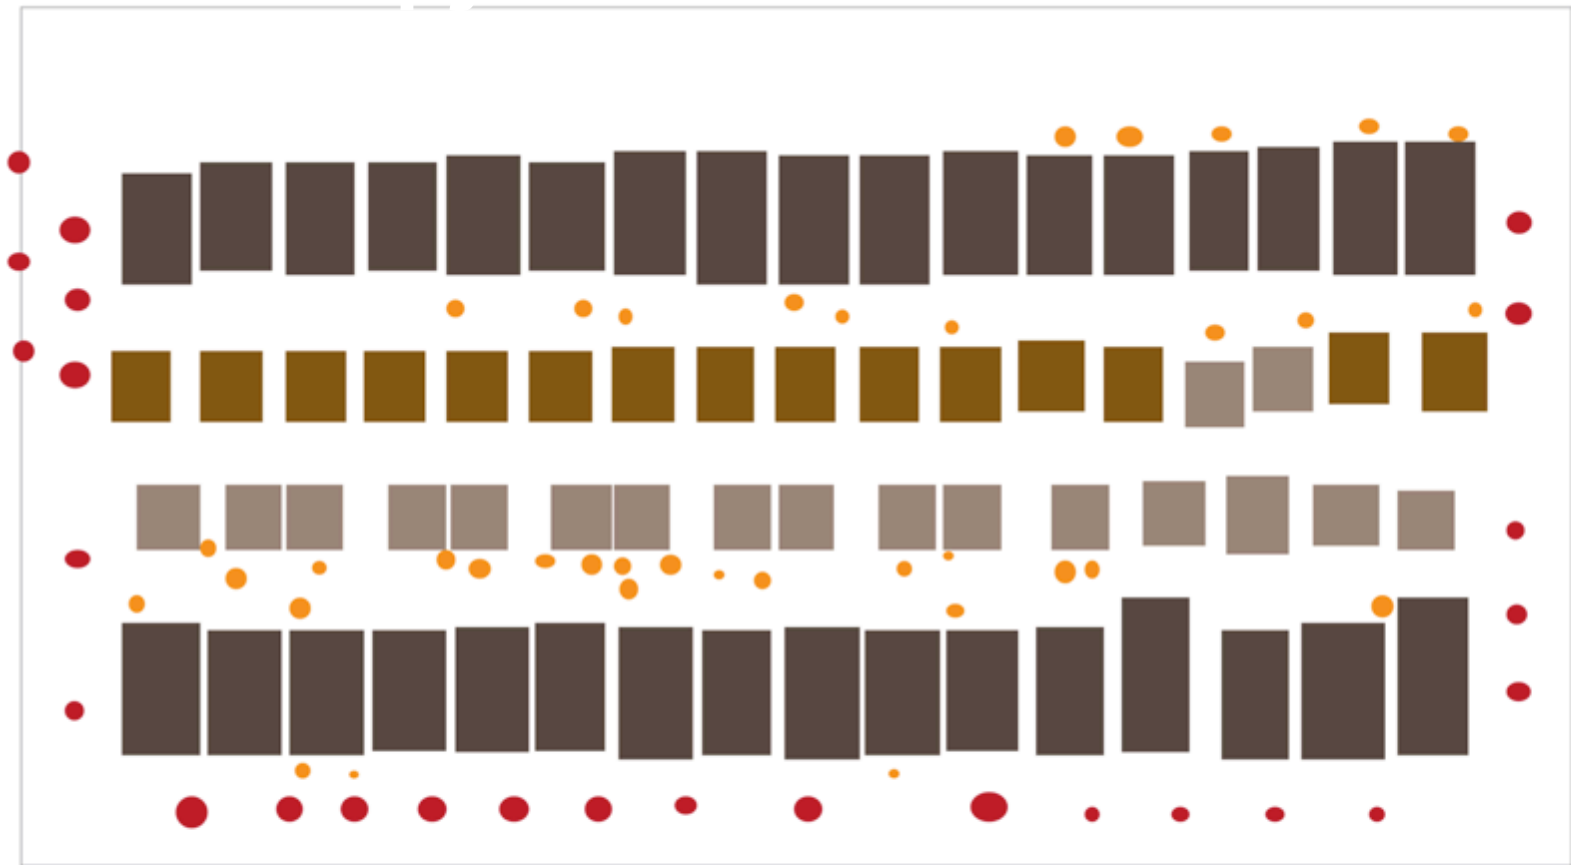

2004 canopy

Population: 10  
Trees: 87

# Current canopy

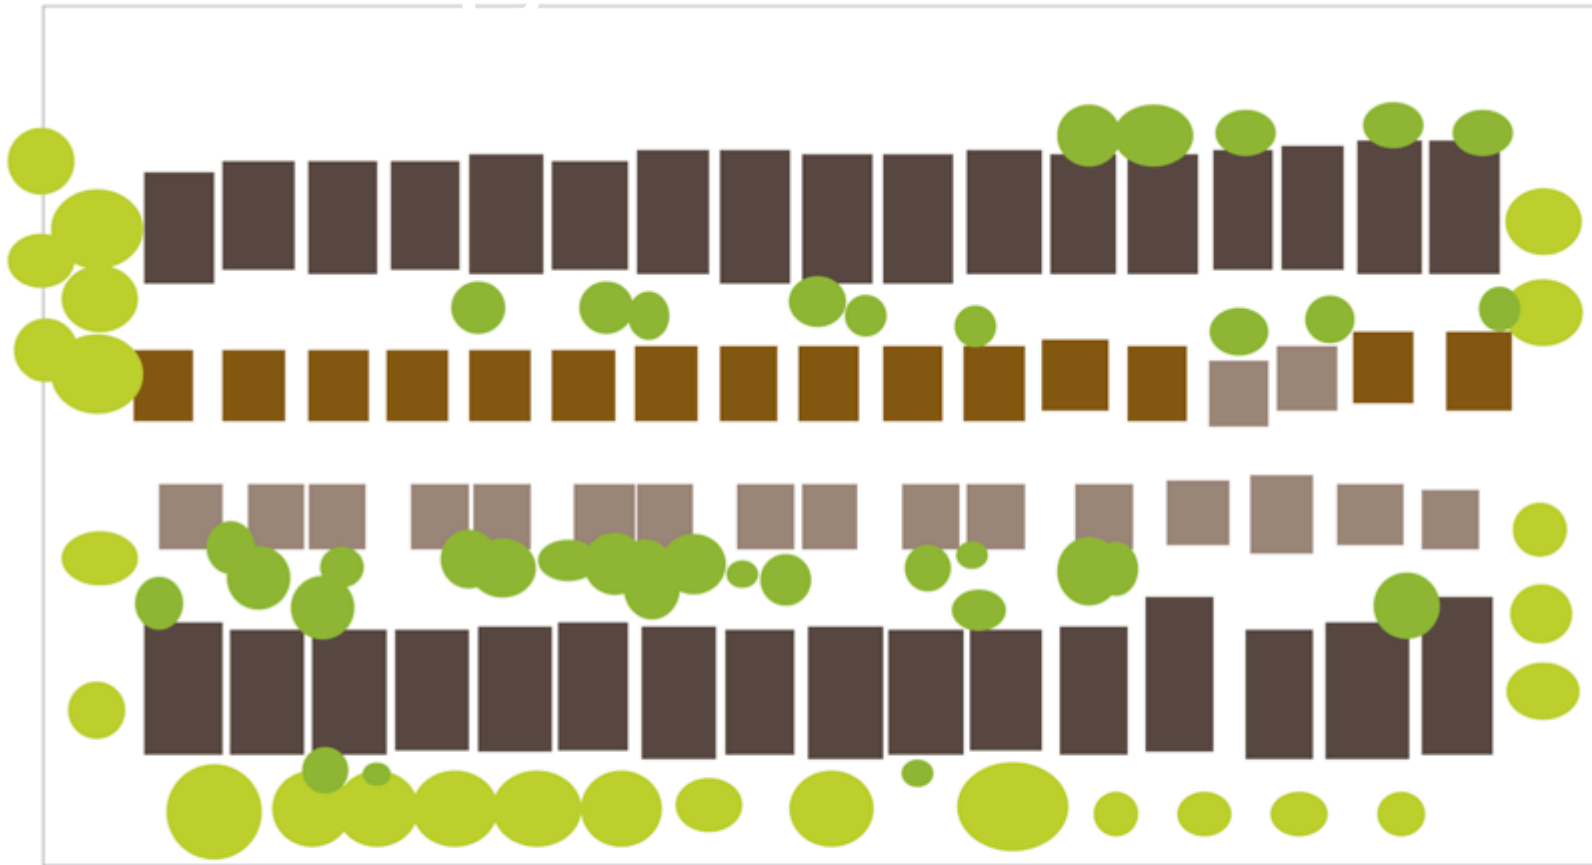

## 2013 canopy

Population: 149  
Trees: 63 ~ 6-7 years old

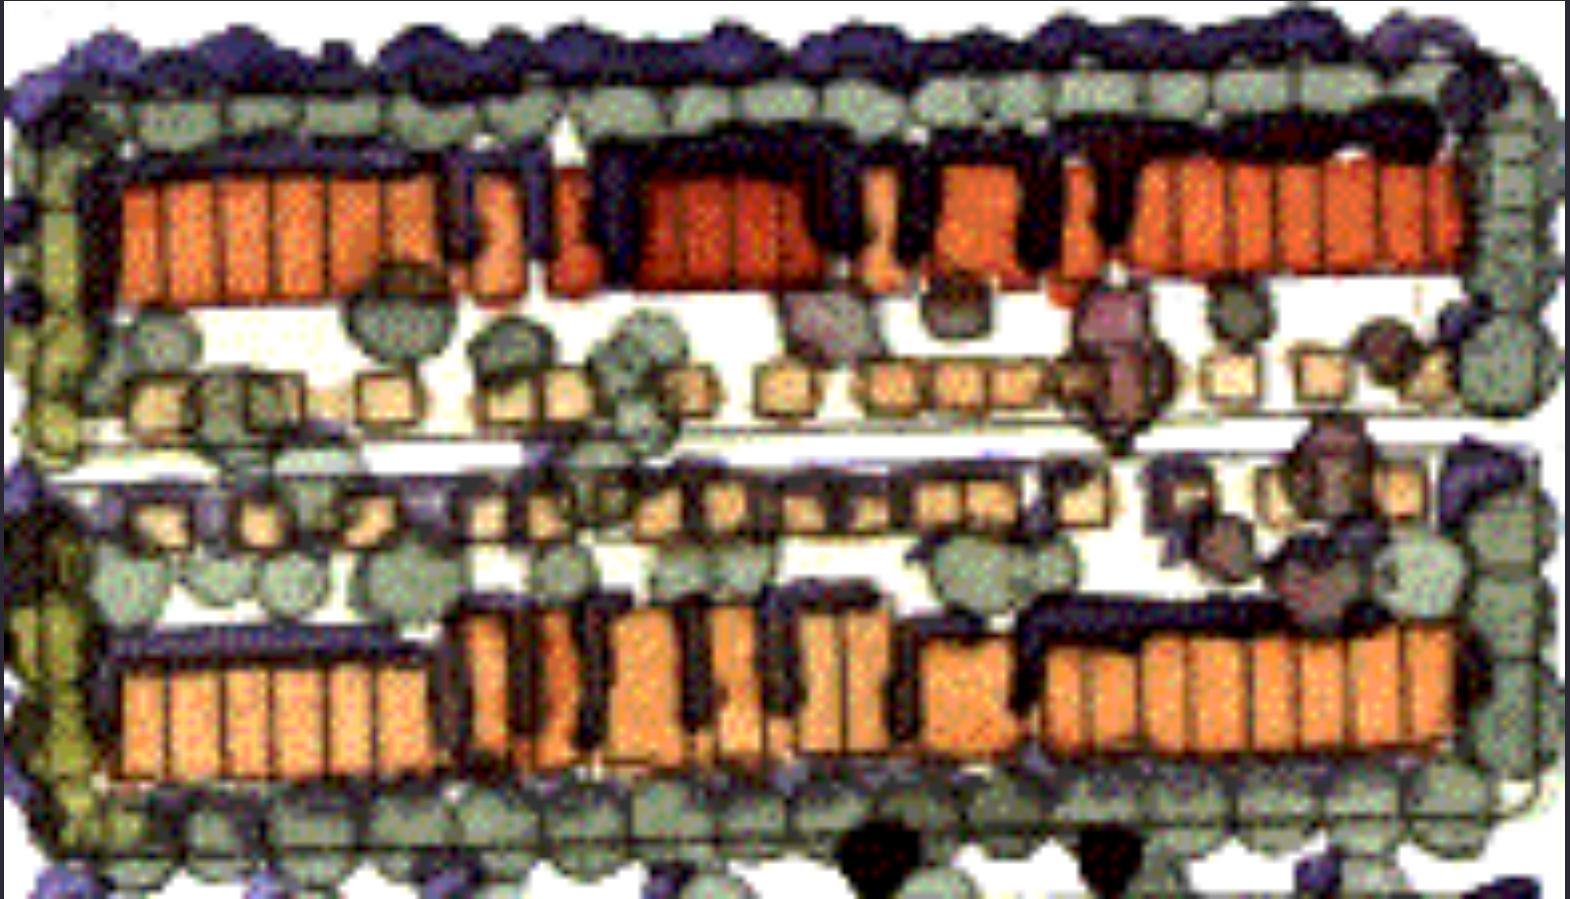

# Future canopy

2053 canopy

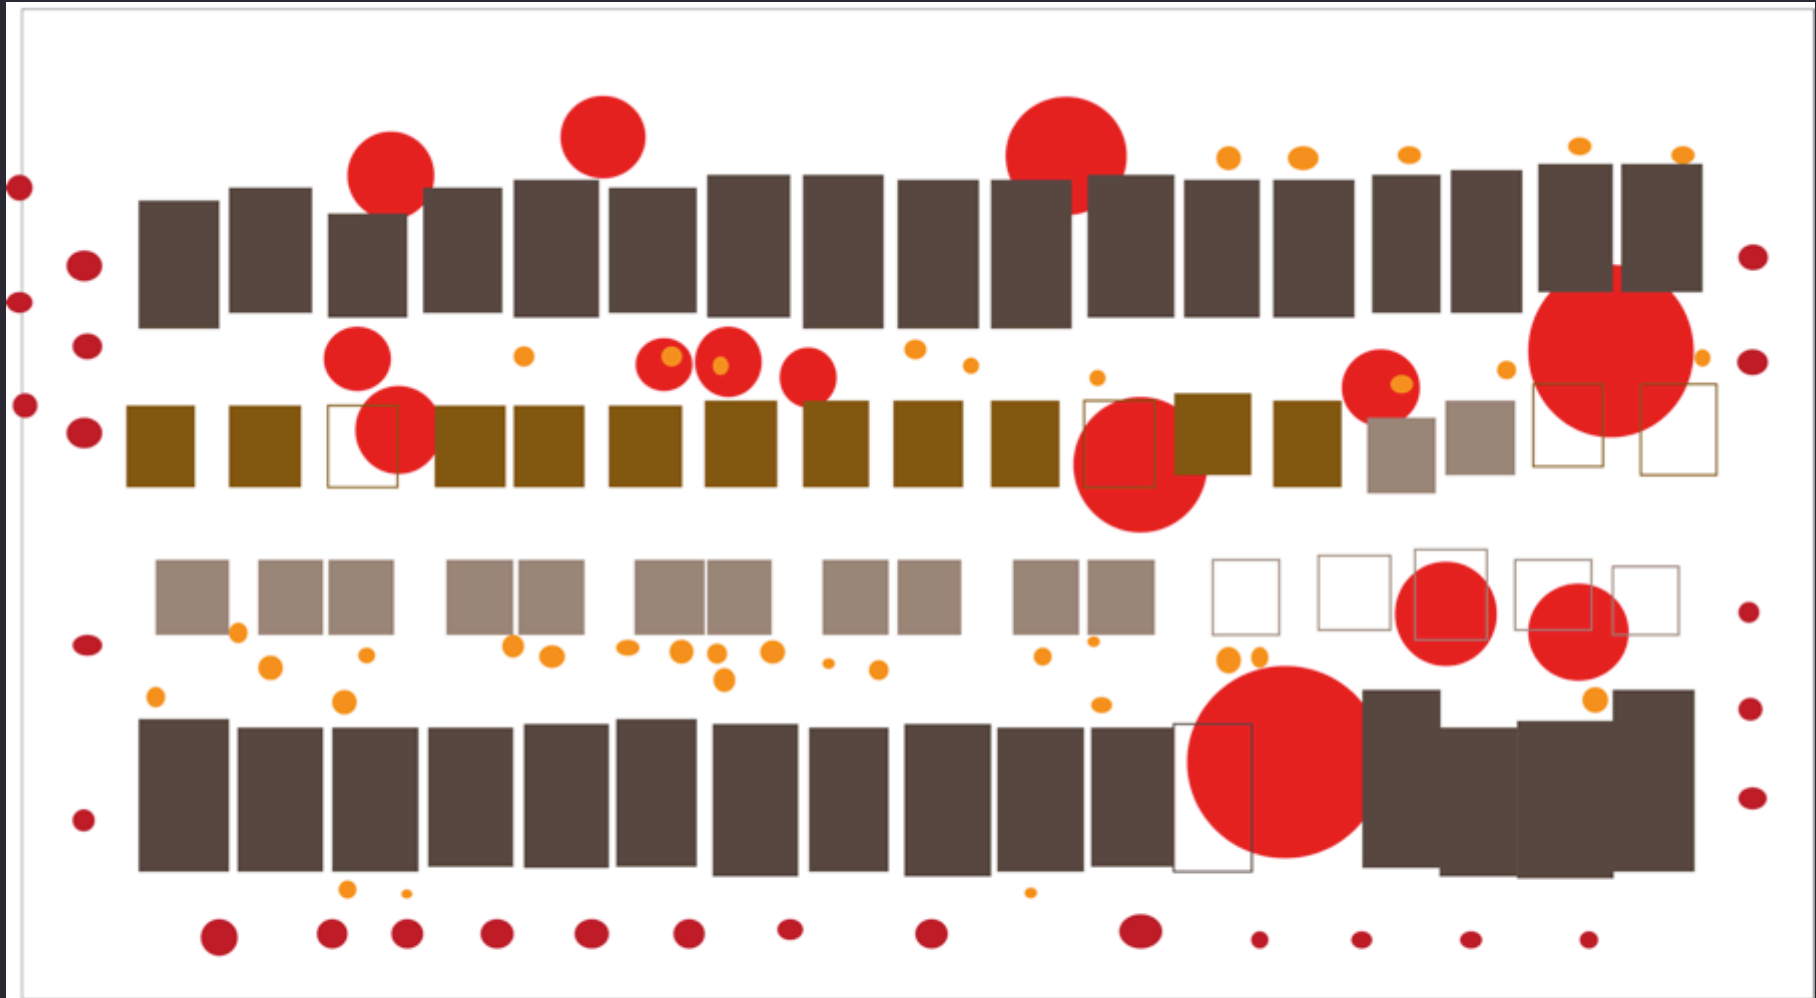

Population: 149  
Trees: 63 - 46 years old

# Design Intentions

60% canopy coverage (at maturity) of street trees  
30% canopy coverage in residential yards

# Mature trees

*Residents prefer native trees, mature trees, and stands of trees*

Population: 145  
Trees: 60 ~ 6-7 years old  
14 Mature trees

# Native trees
